## EDUCATION

---

### Georgia State University

*Bachelor's Degree in Computer Science*

Atlanta, GA

*July 2016 – Dec 2021*

## EXPERIENCE

---

### Software Engineer II

Jan 2025 – February 2026

*CodeMettle - Primary customer: U.S. Army (UNO project)*

*Atlanta, GA*

- Synchronized radio network data across multiple React applications by ensuring that the data processing algorithms are consistent.
- Built Python scripts to simulate radio and device data, then populated Mongo databases for testing and validation.
- Enabled parent systems to execute radio commands through child systems, relaying responses back to users.
- Created Grafana dashboards to monitor the online status of radios, analyze command response behavior, and track failure frequency.
- Enabled the radio management application to fill Grafana dashboards with configuration success and failure statuses.

### Software Engineer I

Jan 2022 – Dec 2024

*CodeMettle - Primary customer: Inmarsat Government*

*Atlanta, GA*

- Rebuilt a grid-based React UI to overcome indexing limitations that prevented users from accessing high-index matrix switch squares.
- Developed logic across multiple JavaScript modules to activate and deactivate satellite data transfer based on location, time, and lease agreement.
- Integrated JavaScript automations with the Inmarsat database to manage the state of satellite bandwidth leases throughout the lease life cycle.
- Configured satellites and modems upon lease activation using JavaScript automations based on customer specifications.
- Developed Python scripts enabling administrators and automation to interface with hardware components for satellite bandwidth management

### Software Engineer Co-Op

Aug 2019 – Dec 2021

*CodeMettle*

*Atlanta, GA*

- Developed Python-based SNMP translators for communication with satellites and modems through CodeMettle applications.
- Engineered an automated SNMP translator generator that maps vendor MIBs to live device OIDs, reducing setup time by 50%.
- Integrated scheduling and inventory applications using REST APIs.

## PROJECTS

---

### Smart E-Commerce Assistant

2024

- Built an IT hardware e-commerce prototype using React.
- Implemented a chatbot powered by ChatGPT that could inform users about inventory and initiate account recovery workflows.

### CodeMettle Hackathon Winner

2022

- Collaborated with two developers to build a React application for on-call employees.
- Captured customer needs via forms and automatically forwarded details to supervisors.

## TECHNICAL SKILLS

---

**Programming Languages:** Python, JavaScript, Java, HTML, CSS

**Frameworks & Tools:** React, Vue.js, Node.js, Git, Grafana, Jira

**Databases:** MongoDB, MySQL
